

WASHOFF FILM TECHNOLOGY FOR GRAPHIC ARTS

C. Preston Brown*

ABSTRACT:

Washoff technology has been around for years, but until recently the available films have not met the requirements of the Graphic Arts industry. However, current and projected washoff films offer significant advantages over conventional silver halide films in some important properties. This paper compares conventional and washoff film technologies using Cronafilm (tm) as the example washoff film.

The author has chosen not to submit this paper for publication.
