THE REQUIREMENTS FOR DEVELOPING LINKS BETWEEN DESKTOP DESIGN SYSTEMS AND PREPRESS

Kennard Cloud*

ABSTRACT

Desktop design systems and desktop publishing systems have extended their reach throughout the entire gamut of print design companies. This paper explores the nature of the interfaces that are required to link lower end design systems to higher end professional prepress systems, and the customer requirements that are shaping the demand for these links.

This paper was not submitted for publication in the 1990 TAGA Proceedings.
